

DevOps Academy thesis project overview:

- Main tasks and assumptions:
 - a) The CI/CD pipeline for a web application fully hosted on AWS cloud
 - b) All underlying infrastructure should be provisioned as IaC and its code is kept in the Git repository
- Cloud Provider: AWS

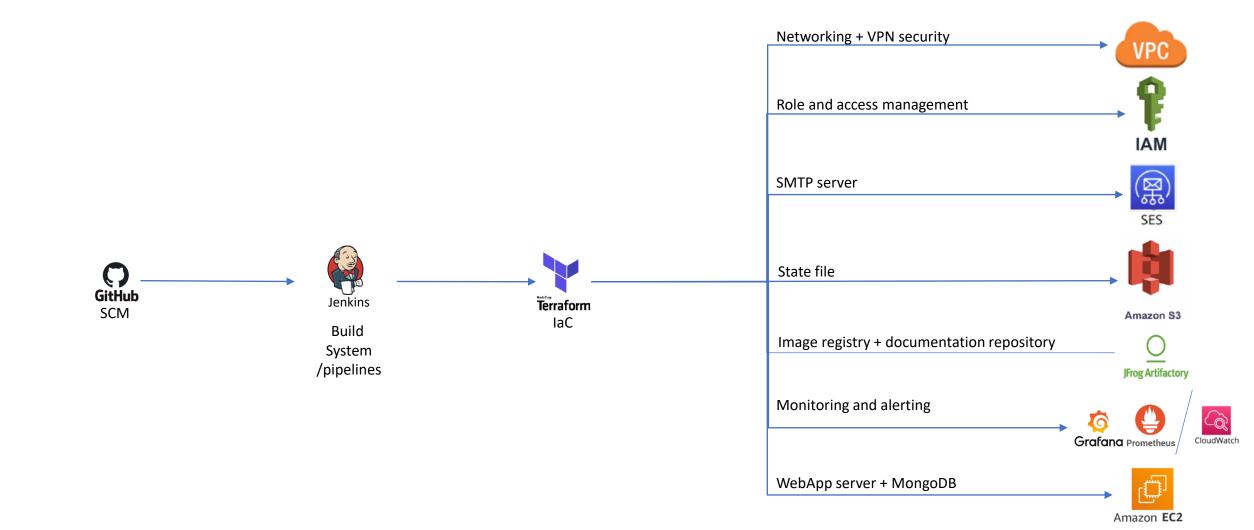

- The application: Simple CRUD WebApp build from scratch in Node.js with

MongoDB-based database

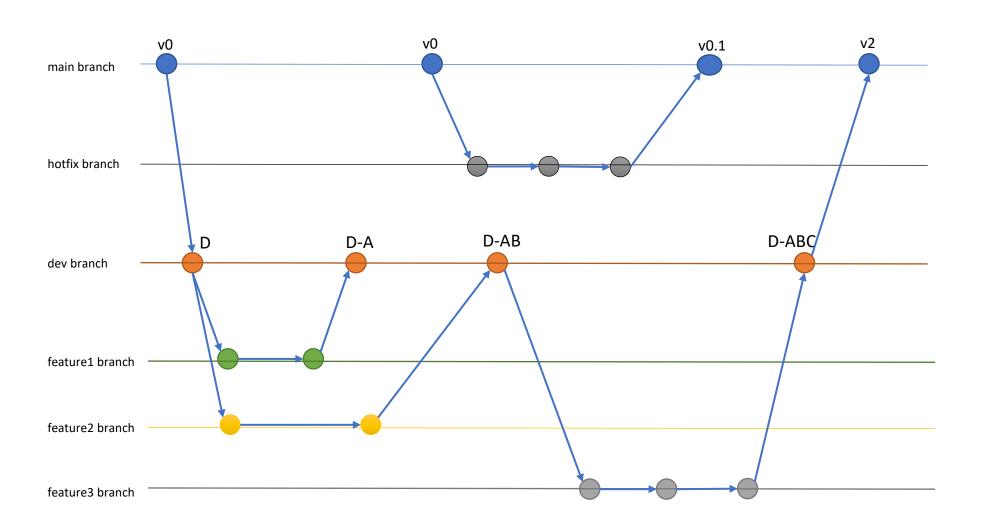

Initial setup of production and staging infrastructures

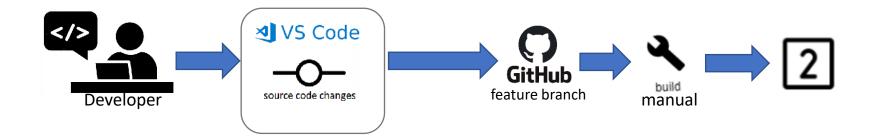

- pipelines in the selected Build System provision two completely separate infrastructure instances (for dev and for prod environments)
- Terraform backend (the state file) is located in AWS S3 storage, so it can be shared among later CI/CD stages tasks

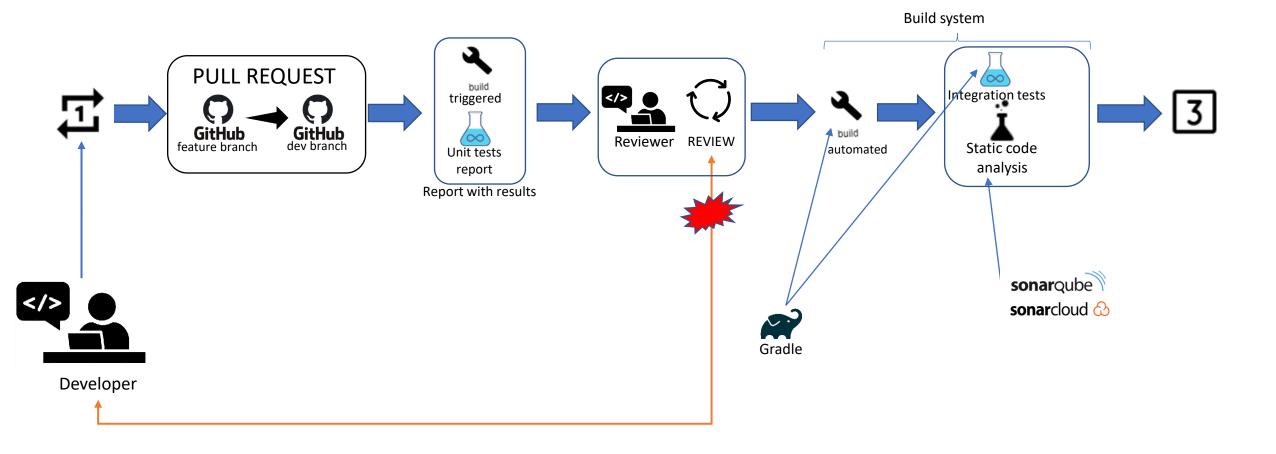

Branching strategy GitHub

Integration - 2

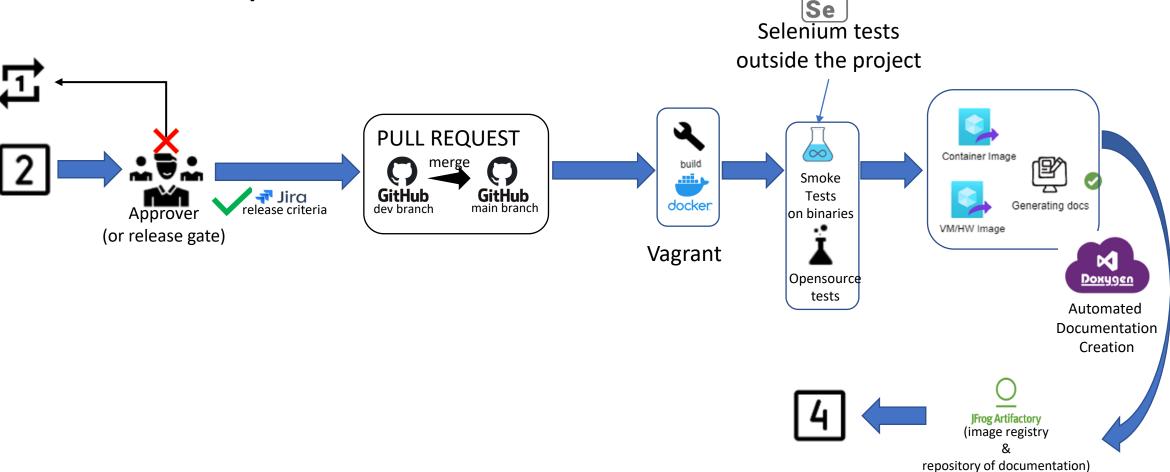

CI/CD Pipelines proposition

DEV (Feature pipeline) Trigger: PR to Dev Branch.

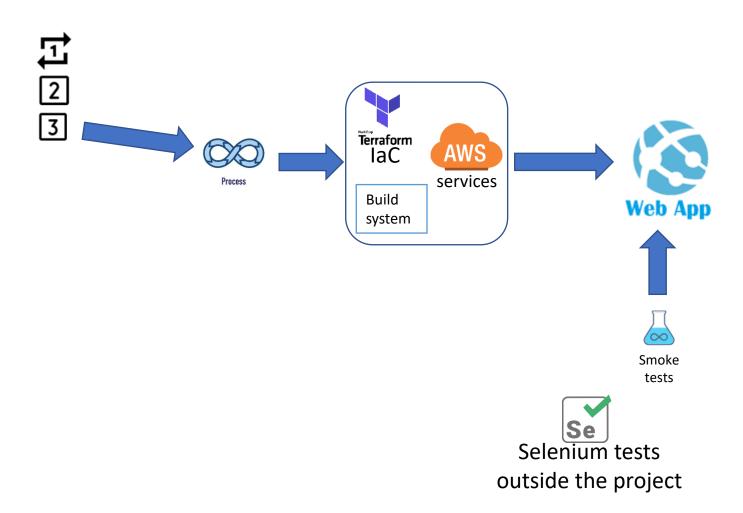

Delivery to Dev	Build	Type of Conducted Tests	Static Code Analysis	Deploy to AWS	Documentation generation
PR in GitHub, Review result, git merge to dev branch	Building Node.js webapp, create artifacts, artifacts storing	Integration tests in Gradle, *OpenSource test	In Sonarcube /Sonarcloud	Terraform based IaC from dev branch	Fully automatic using Doxygen (Release notes)

	Initialization	Build	Tests	Static Code Analysis	Dockerization	Deploy To AWS
Average stage times: (Average <u>full</u> run time: ~1min 40s)	13s	33s	434ms	481ms	35s	18s
#133 Aug 29 No	13s	32s	424ms	479ms	35s	16s

Delivery - 3

Deployment -4

Developer

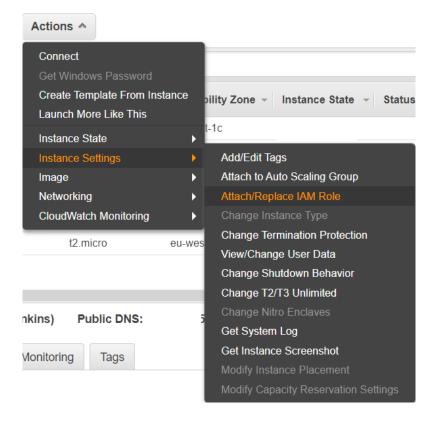

CI/CD Pipelines proposition

PROD (Release Pipeline) Trigger: accepted release criteria

Delivery to Prod	Build	Type of Conducted Tests	Deploy to AWS	Documentation generation	Generate monitoring report
PR in GitHub,, git merge to prod branch	Building Node.js webapp, create and store artifacts in Artifactory	Smoke Tests on Prod	Terraform based IaC from prod branch	Fully automatic using Doxygen (Release notes)	Use SES and notify about monitoring results

	Initialization	Merge to Prod	Build	Dockerization	Deployment	Smoke Tests	Documentation generation
Average stage times: (Average <u>full</u> run time: ~1min 34s)	19s	329ms	18s	24s	7s	134ms	134ms
#26 Aug 29 No	11s	369ms	31s	35s	14s	429ms	420ms

Jenkins Agents

Amazon EC2 2.0.0

- Created IAM role "Jenkins-ec2-role" with permission: AmazonEC2FullAccess
- Add role to EC2 instance with Jenkins installed
- Create AWS security group for Jenkins Agent with open ssh connection from security group used by Jenkins server
- Install Jenkins plugin: Amazon EC2
- Configuration of plugin in Jenkins System
- Configuration of Jenkins Agent creation
